Kjaerhus Audio Launches Golden Modulator – A professional Modulation VST Plug-in.

The GMO-1 is a Professional Modulation VST-Plug-in designed to provide high quality Chorus, Flanger, Tremolo, Panning and other Frequency-, Delay- and Amplitude- Modulated effects. It is based on the core development of the highly acclaimed 'Classic Chorus' and 'Classic Flanger' Plug-ins, but with many new features and more robust sound processing.

The GMO-1 is the first Plug-in in a new series called the 'Gold Series'. It was designed in collaboration with professional musicians, studio producers, and technicians to ensure that it achieves all the expectations of a modern professional VST-Plug-in.

64 Bit processing, 4x oversampling and 192 kHz support are just some of the features that brings this Plug-in into a 'World Elite' class of modern Plug-ins.

The GMO-1 has no latency delay and can therefore be used in real-time for live gigs as well as in the studio.
